1. About this document

The Verderflex Rapide peristaltic pump, has been developed according to the latest technology and subject to continuous quality control. These operating instructions are intended to facilitate familiarization with the pump and its designated use. The relevant information will act as a guideline for you in operating the pump; alternative courses of action are also described should you be unable, for any reason, to follow those procedures initially given. You are advised to follow these guidelines to achieve maximum efficiency. These operating instructions do not take into account local regulations; the operator must ensure that such regulations are strictly observed by all, including the personnel called in for installation.

1.1 Target groups

2. Safety

The manufacturer does not accept any liability for damage resulting from disregard of this documentation.

2.1 Intended use

- Only use the pump to handle compatible fluids as recommended by the manufacturer (\(\rightarrow\) 10.1 Technical specifications).
- Adhere to the operating limits.
- Consult the manufacturer regarding any other use of the pump.

Prevention of obvious misuse (examples)
- Note the operating limits of the pump with regard to temperature, pressure, flow rate and motor speed (\(\rightarrow\) 10.1 Technical specifications).
- Do not operate the pump while the inlet/outlet valve is closed.
- Only install the pump as recommended in this manual. For example, the following are not allowed:
  - Installing the pump without proper support.
  - Installation in the immediate vicinity of extreme hot or cold sources.
  - Explosive atmosphere

2.2 General safety instructions

Observe the following regulations before carrying out any work.

2.2.1 Product safety

These operating instructions contain fundamental information which must be complied with during installation, operation and maintenance. Therefore this operating manual must be read and understood both by the installing personnel and the responsible trained personnel / operators prior to installation and commissioning, and it must always be kept easily accessible within the operating premises of the machine.

- Not only must the general safety instructions laid down in this chapter on “Safety” be complied with, but also the safety instructions outlined under specific headings.
- Operate the pump only if the pumping unit and all associated systems are in good functional condition.

- Only use the pumping system as intended, fully aware of safety and risk factors involved, and in adherence to the instructions in this manual.
- Keep this manual and all other applicable documents complete, legible and accessible to personnel at all times.
- Refrain from any procedure or action that would pose a risk to personnel or third parties.
- In the event of any safety-relevant faults, shut down the pump immediately and have the malfunction corrected by qualified personnel.
- The installation of the pump, associated pipe work and electrical fittings must comply with the requirements of installation given in this manual and any local national or regional health and safety regulations.

2.2.2 Obligation of the operating company

Safety-conscious operation

- Ensure that the following safety aspects are observed and monitored:
  - Adherence to intended use
  - Statutory or other safety and accident-prevention regulations
  - Safety regulations governing the handling of hazardous substances if applicable
  - Applicable standards and guidelines in the country where the pump is operated

Make personal protective equipment available pertinent to operation of the pump; as required.
Qualified personnel

- Ensure that all personnel tasked with work on the pump have read and understood this manual and all other applicable documents, including the safety, maintenance and repair information, prior to use or installation of the pump.
- Organize responsibilities, areas of competence and the supervision of personnel.
- Have all work carried out by specialist technicians only.
- Ensure that trainee personnel are under the supervision of specialist technicians, at all times, when working on the pumping system.

Safety equipment

- Provide the following safety equipment and verify its functionality:
  - For hot, cold and moving parts: safety guarding should be provided by the operating company.
  - For potential build up of electrostatic charge: ensure appropriate grounding if and when required.

Warranty

The warranty is voided if the customer fails to follow any and all instructions, warnings and cautions in this document. Verder has made every effort to illustrate and describe the product(s) in this document. Such illustrations and descriptions are, however, for the sole purpose of identification and Do not express or imply a warranty that the products are merchantable or fit for a particular purpose, or that the products will necessarily conform to the illustration or descriptions.

Obtain the manufacturer’s approval prior to carrying out any modifications, repairs or alterations during the warranty period. Only use genuine parts or parts that have been approved by the manufacturer.

For further details regarding warranty, please refer to terms and conditions.

2.2.3 Obligation of personnel

It is imperative that the instructions contained in this manual are complied with by the operating personnel at all times.

- Do not use them as a fixing point for winches or supports
- Do not de-ice using gas burners or similar tools
- Do not remove the safety guarding for hot, cold or moving parts during operation.
- Reinstate the safety equipment on the pump as required by regulations after any repair / maintenance work on the pump.

2.3 Specific hazards

2.3.1 Hazardous pumped liquids

- Follow the statutory safety regulations when handling hazardous pumped liquids (e.g. hot, flammable, poisonous or potentially harmful).
- Use appropriate personal protective equipment when carrying out any work on the pump.

2.3.2 Sharp edges

- Use protective gloves when carrying out any work on the pump
3. Layout and function

Peristaltic industrial tube pump, Verderflex Rapide, is simple by design in its construction and operation. The medium to be pumped does not come into contact with any moving parts and is totally contained within a tube. A rotor passes along the length of the tube, compressing it. This motion forces the contents of the tube directly in front of the rotor to move forward along the length of the tube in a 'positive displacement', peristaltic movement. In the wake of the rotor’s compressing action, the natural elasticity of the tube material forces the tube to open and regain its round profile, creating suction pressure, which recharges the pump.

3.1 Design details

The Verderflex Rapide range of tube pumps provide a balanced selection of simple to operate peristaltic pumps. The family offers the customer pump choices that are compact, can have multiple heads, are simple by design, and the Smart series provide rapid tube changeovers.

3.2 Labelling

3.2.1 Name Plate

![Name plate image]

Figure 1: Name plate

**Note:** When requesting spares, the model and serial number should always be quoted.

9. Motor
4. Transport, storage and disposal

4.1 Transport

Always transport the unit in an upright position and ensure that the unit is securely attached to the pallet.

4.1.1 Unpacking and inspection on delivery
1. Unpack the pump/pump unit upon delivery and inspect it for transport damage.
2. Report any transport damage to the manufacturer/distributor immediately.
3. Retain the pallet if any further transport is required.
4. Dispose all packaging material according to local regulations.

4.1.2 Lifting

DANGER

Death or crushing of limbs can be caused by falling loads!

1. Use lifting gear appropriate for the total weight to be transported.
2. Do not stand under suspended loads.

4.2 Treatment for storage

Unpainted steel surfaces should be coated with rust inhibitor and the unit should be stored in a dry, dust free environment not exceeding 60°C

4.3 Interim storage before installation

Make sure the storage room meets the following conditions:

- Dry, humidity not to exceed 80%
- Out of direct sunlight
- Frost-free; temperature range 0 to 40°C
- Vibration-free; minimize
- Dust-free; minimize

4.4 Disposal

With prolonged use, pump parts can get contaminated by poisonous or radioactive pumped liquids to such an extent that cleaning may be insufficient.

WARNING

Risk of poisoning and environmental damage by the pumped liquid or oil!

- Use suitable personal protective equipment when carrying out any work on the pump.
- Prior to disposal of the pump:
  - Collect and dispose of any leaking pumped liquid or oil in accordance with local regulations.
  - Neutralize residues of pumped liquid in the pump.
- Dispose of the pump unit and associated parts in accordance with statutory regulations.
5. Installation and connection

NOTE

Material damage due to unauthorized modification on pump unit!
- Do not make any structural modifications to the pump unit or pump casing
- Do not carry out any welding work on the pump unit or pump casing

NOTE

Material damage caused by ingress!
- Do not remove any protective flange covers until immediately before connecting the pipes to the pump

5.1 Preparing for installation

5.1.1 Checking the ambient conditions
1. Make sure that the operating conditions are complied with (→ 10.1 Technical specifications)
2. Make sure the required ambient conditions are fulfilled (→ 10.1.4 Ambient conditions)

5.1.2 Preparing the installation site
- Ensure the installation site meets the following conditions:
  - Pump is freely accessible from all sides
  - Sufficient space is available for the installation/ removal of the pipes and for maintenance and repair work, especially for the removal and installation of the tube.

5.1.3 Preparing the foundation and surface
- Make sure the foundation and surface meet the following conditions:
  - Level
  - Clean (no oil, dust or other impurities)
  - Capable of bearing the weight of the pump unit and all operating forces
  - Ensure the pump is stable and cannot tip over

5.2 Installing the Rapide

5.2.1 Key features
- Robust design with thick wall tube for suction and pressure handling.
  1. Flow rates up to 840 l/hr (222 US GPH)
  2. Pressures up to 2 Bar (29 PSI)
  3. Typically used in:
     - Printing production
     - Dispensing
     - Industrial detergent applications

5.2.2 Description of the Pump Head
- The pump head comprises three main parts:
  1. The rotor with rollers which are responsible for the peristaltic action of the pump
  2. The transparent front cover, which allows the operator to check the pump operation and the direction of rotation.
  3. The tube clamps, which can be adjusted for any permitted tube size. The purpose of the clamps is to stop the tube from ‘walking’ to the discharge side.
5.2.3 Installing the tube
1. Remove the clamp, but leave the front cover in place
2. Run the pump at low speed and carefully feed tube through the inlet
3. When tube reaches outlet, use blunt end rod to guide the tube out.
4. Fit tube clamp loosely, and position tube with marked lines adjacent to edge of pump housing and tube clamp.
5. Tighten the tube clamp securely

5.2.4 Changing rotor
1. Align grub screw hole with flat on shaft
2. Align peak of roller with peak of tube track or set rotor distance back from front of pump housing as indicated (Refer Figure 4.2)
3. Fasten grub screw securely

5.3 Installing the Rapide ‘S’

5.3.1 Key features
The Rapide ‘S’ includes a quick tube change, ergonomic design for ease of use.
1. Flow rates up to 1,020 l/hr (269 US GPH)
2. Pressures up to 2 Bar (29 PSI)
3. Multi channel options
4. Typically used in:
   - Chemical dosing
   - Industrial fluid transfer
   - Heavy duty environments

5.3.2 Installing the tube
1. Insert tube on top of the rollers
2. Fit the saddle to one set of dowels
3. Open up the ski boot handle and fit the catch over the saddle.
4. Push the handle down to lock the saddle into place over the other set of dowels.

Figure 4 Installing tube on a Rapide

Figure 5 Installing tube on a Rapide S
5.3.3 Exploded view of the Rapide ‘S’ head

Figure 6 Exploded view of the Rapide S head

5 Ski boot handle  
6 Saddle  
7 Tie bar  
8 Drive shaft  
9 Clamp base  
10 Rotor  
11 Front Cover  
12 Locking nuts
5.3.4 Description of the Pump Head

The Rapide ‘S’ pump head comprises four main parts:

1. The rotor with rollers which are responsible for the peristaltic action of the pump.
2. The transparent front cover, which allows the operator to check the pump operation and the direction of rotation.
3. The lower section, which houses the U-shaped tube clamps. The tube clamps are adjusted, for any permitted tube size, by means of a screw driver slot or the thumb-screws, which are located in the underside/side of the clamp base. The purpose of the clamps is to stop the tube from ‘walking’ to the discharge side. On the pressure side, the clamps are designed to self-centre the tube.
4. The tube saddle counteracts the compressive action of the rotor. The saddle can be removed by unlocking the ‘ski-boot’ style lever.

5.3.5 Optional Tube Saddle Status Detection SSD

The tube saddle status detection interlocks the tube saddle and the pump. The tube saddle status detection comprises two main components:

1. A reed switch embedded in the back plate of the pump head.
2. A set of two magnets fitted to the tube saddle, one at either side. This means that it does not matter, which way round the saddle is fitted to the pump head.

When connected, the tube saddle status detection can detect if the tube saddle is fitted properly and can either:

- Not allow the pump to be started or,
- Stop the pump immediately if the saddle is opened while the pump is running.

5.3.6 Adjusting the tube clamp

To insert the tube clamps, unscrew thumb-screw fully into tube clamp and slide into clamp base, unscrew thumb-screw sufficiently to insert clamp block over thumb-screw flange and into clamp base. Take care that the tube clamp is inserted the correct way round, i.e. centre line of tube recess is in the centre of the clamp base. If this is not done the tube clamp will hit the tube saddle.

Tube clamp tensioning screws

1. Use a flat bladed screw driver to rotate the recessed screws, this will tension or slacken off the tube clamps respectively. Alternately adjust the thumb screw to adjust the clamps.
2. Rotate until tube is adequately tightened and tube walk is eliminated.

Figure 7 Tube clamp tensioning screw

Figure 8 Tube clamp thumb screw (head variant)
5.3.7 Installing a multi-channel pump head

Installing a multi-channel pump head is very similar to the procedure of fixing a standard pump head. However, please note:

- Each channel is fitted with its own saddle status detector. The wires should be threaded through the horizontal bore of each lower pump head section, pointing towards the pump casing.
- Behind the back plate, which is bolted to the pump casing, connect the wires in series to the cable leading to the safety board.
- Finally stack up the individual components on the tie bars and drive shaft to assemble the multi pump head.

5.4 Electrical connection

5.4.1 Installing motor gearbox on bare-shaft pump

1. Lift motor and gearbox using suitable lifting gear.
2. Apply anti seize grease to the gearbox shaft.
3. Offer gearbox shaft up to the adaptor sleeve.
4. Align key to the key way.

5.4.2 Connecting to power supply

1. Connect motor to the rated power supply. Ensure the correct gland is used and that the earth connection is made and secured.
2. Run the pump slowly to ensure correct rotation.

6. Operation

6.1 Starting the pump

- Pump set up and connected properly
- Motor set up and connected properly
- All connections stress-free and sealed
- All safety equipment installed and tested for functionality

DANGER

Risk of injury and poisoning due to pumped liquid spraying out!
- Use personal protective equipment when carrying out any work on the pump.

WARNING

Risk of injury and poisoning due to hazardous pumped liquids!
- Safely collect any leaking pumped liquid and dispose of it in accordance with environmental rules and requirements.

DANGER

Equipment damage due to excess pressure!
- Do not operate the pump with the discharge-side fitting closed.
- Operate the pump only inside the tolerances specified by the manufacturer (→ 10.1 Technical specifications)
6.3 Operating the stand-by pump

- Operate the stand-by pump at least once a week to avoid formation of permanent dents on the tube.

7. Maintenance

- Only trained service technicians should be employed for fitting and repair work. Present a pumped medium certificate (DIN safety data sheet or COSHH/MSDS safety certificate) when requesting service.

**DANGER**

Risk of injury due to running pump or hot parts!
- Do not carry out any repair/maintenance work on a pump in operation.
- Allow the pump to cool down completely before starting any repair work.

7.1 Inspections

- The inspection intervals depend on the pump operating cycle.

1. Check at appropriate intervals:
   - Normal operating conditions unchanged
2. For trouble-free operation, always ensure the following:
   - No leaks
   - No unusual running noises or vibrations
   - Tube in position

6.1.1 Switching on

1. Switch on the motor and make sure it is running smoothly.
2. Run the pump, flushing with water first (cold commissioning) to check for leaks.
3. Verify that neither the pump unit nor the tube connections are leaking.
4. Perform a second flush by running the pump, 10–20 revolutions with pumped liquid, to remove residue and water inside the pump.

6.2 Operation

6.2.1 Switching on

- Pump pre-commissioned (→6.1)
- Pump prepared and filled

**DANGER**

Risk of injury due to running pump!
- Do not touch the moving parts of a running pump.
- Do not carry out any repair/maintenance work on the running pump.
- Allow the pump to cool down completely before starting any work on the unit.

1. Open the suction-side and the discharge-side fittings.
2. Switch on the motor and make sure it is running smoothly.

6.2.2 Switching off (Refer to → 6.1.2)

**NOTE**

Damage to tube due to sediments!
- If the pumped liquid crystallizes, polymerizes or solidifies
  - Flush the tube
  - Make sure that the flushing liquid is compatible with the pumped liquid.
7.2 Maintenance

These pumps are generally maintenance free and any work should normally be limited to inspections; these may be more frequent in dust and/or hot condition.

**DANGER**

**Risk of electrocution!**
- Have all electrical work carried out only by qualified electricians.

---

7.2.1 Cleaning the pump

**NOTE**

High water pressure or spray water can damage motors!
- Do not clean motors with water or steam jet.
  1. Clean large-scale grime from the pump head.
  2. Rinse the tube carefully to remove chemicals.

---

7.2.2 Maintenance schedule

<table>
<thead>
<tr>
<th>Task</th>
<th>Frequency</th>
<th>Action</th>
</tr>
</thead>
</table>
| Check pump and gearbox for leaks and damage | – Before pump start up  
– Daily visual inspection  
– Scheduled intervals during operation | ▶ Repair leaks and damage before operating the pump  
▶ Replace components as necessary  
▶ Clean up any spillage. |
| Check pump housing lubrication level | – Before pump start up  
– Daily visual inspection  
– Scheduled intervals during operation | ▶ → Gear motor instruction manual. |
| Check pump for unusual temperatures or noise in operation | – Daily visual inspection  
– Scheduled intervals during operation | ▶ Check pump, gearbox and bearing housing for damage.  
▶ Replace worn components. |
| Replace tube element               | – After inspection when required  
– When flow has dropped by 25% of nominal value  
– When the tube is burst/damaged | ▶ Replace hose tube (→ 5.2.3 & 5.3.2 Tube change) |
| Check pump housing and rotor internally | – Annually  
– On replacing the hose | Worn and damaged surfaces give rise to premature hose failure  
▶ Replace worn components.  
▶ Check bearing play and function. |

---

Table 4 Maintenance schedule
7.3 Repairs

**DANGER**

Risk of death due to electric shock!

- Have all electrical work carried out by qualified electrician only

7.3.1 Preparations for dismounting

- Pump completely emptied, flushed and decontaminated
- Electrical connections disconnected and motor locked out against being switched on again
- Pump cooled down
- Auxiliary systems shut down, depressurized and emptied

**WARNING**

Risk of injury while removing the pump components!

- Use protective equipment when carrying out any work on the pump.
- Observe manufacturer’s instructions (e.g. for Motor, coupling, gearbox...).

7.3.2 Returning the pump to the manufacturer

- Completely emptied and decontaminated.
- Pump cooled down
- Tube removed (→ 5.2.3 & 5.3.2 Removing the tube)

Obtain prior authorisation before repair or return of the pump.

- Enclose a completed document of compliance when returning pumps or components to the manufacturer

<table>
<thead>
<tr>
<th>Repairs</th>
<th>Measure for return</th>
</tr>
</thead>
<tbody>
<tr>
<td>...at the customer’s premises</td>
<td>– Return the defective component to the manufacturer.</td>
</tr>
<tr>
<td></td>
<td>– Decontaminate if necessary.</td>
</tr>
<tr>
<td>...at the manufacturer’s premises</td>
<td>– Flush the pump and decontaminate it if it was used for hazardous pumped liquids.</td>
</tr>
<tr>
<td>...at the manufacturer’s premises for warranty repairs</td>
<td>– Only in the event of hazardous pumped liquid, flush and decontaminate the pump</td>
</tr>
</tbody>
</table>

Table 5 Measures for return

7.3.3 Rebuild / Repair

- Reinstall the components, in accordance with the marks applied.

**NOTE**

Material damage due to unsuitable components!

- Always replace lost or damaged bolts with bolts of the same strength and material.

1. Observe the following during the installation:
   - Replace worn parts with genuine spare parts.
2. Clean all parts.
3. Reassemble the pump (→ refer sectional drawing).
4. Install the pump in the system (→ 5 Installation and connection)

7.4 Ordering spare parts

For trouble-free replacement in the event of faults, we recommend keeping spare parts available on site.

- The following information is mandatory when ordering spare parts (→ Name plate):
  - Pump model
  - Year of manufacture
  - Part number / Description of part required
  - Serial number
  - Quantity
8. Storing pumps and hoses

Verderflex pumps are designed for continuous use, however, there may be instances when pumps are withdrawn from use and stored for extended periods. We recommend certain pre-storage actions and precautions be taken whilst pumps and their components are not in use.

Similarly, tubes and spares may be held in stock to service working pumps and their recommended storage conditions are advised.

8.1.1 Pre-Storage Actions

– The tube should be removed from the pump
– The pump casing should be washed out allowed to dry and any external build up of product removed.

8.1.2 Storage Conditions

– Pumps should be stored in a dry environment, out of direct sunlight. Depending on these conditions, it may be advisable to place a moisture-absorbing product, such as Silica gel, inside the pump’s casing or to coat the pump’s inner surfaces with moisture-repelling oil, such as WD40, whilst the pump is stored.
– Gearboxes may require intermittent attention as indicated by the gearbox manufacturer’s recommendations.
– Tubes should be stored as supplied in their wrapper and should be stored away from direct sunlight and at room temperature.
9. Troubleshooting

9.1 Pump malfunctions

If malfunctions occur which are not specified in the following table or cannot be traced back to the specified causes, please consult the manufacturer.

Possible malfunctions are identified and respective cause and remedy are listed in the table.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low Flow / low discharge pressure</td>
<td>Ratio of inner diameter / wall thickness too large for the application (tube too 'soft')</td>
<td>Use thicker wall thickness tube with the same inner diameter. This may require a different saddle or pump. Run Pump slower with larger inner diameter tube</td>
</tr>
<tr>
<td></td>
<td>Viscosity too high</td>
<td>Use a bigger tube or run the pump slower</td>
</tr>
<tr>
<td></td>
<td>Suction lift too high, resulting in tube not fully returning to fully round</td>
<td>Use thicker wall thickness tube with the same inner diameter. This may require a different saddle or pump. Use a bigger pump running slower</td>
</tr>
<tr>
<td></td>
<td>Wall thickness does not match the specifications of the saddle used.</td>
<td>Purchase appropriate saddle or change wall thickness</td>
</tr>
<tr>
<td></td>
<td>Discharge pressure too high</td>
<td>Poor flow is caused by excessive backflow, reduce discharge pressure</td>
</tr>
<tr>
<td>Tube walks through pump head</td>
<td>Tube outer diameter too small for the pump head used</td>
<td>Adjust tube clamp tension</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Use tube with correct outer diameter.</td>
</tr>
</tbody>
</table>

Table 8 Pump Specifications – Rapide ‘S’

10.1.3 Tube Variants

For safety reasons we do not recommend pumping liquids greater than 85°C (185°F). The following criteria are important when selecting a tube:

- Chemical resistance
- Food grade quality
- Tube life
- Physical compatibility

10.1.4 Ambient conditions

Operation under any other ambient condition would require approval from the manufacturer

Operating conditions

- Ambient temperature –5 °C to +45 °C
- Relative humidity – long—term ≤ 85 %
- Setup height above sea level ≤ 1000m / 3000 ft above sea level

Storage conditions

- Ambient temperature +10 °C to +50 °C
- Relative humidity – long—term ≤ 85 %

12 Declaration of conformity according to EC Machine Directive

EC declaration of conformity according to machine directive, appendix II A

We, VERDER Ltd., Unit 3 California Drive, Castleford hereby declare that the following machine adheres to the relevant EC directives detailed below

Designation Verderflex Rapide
Verderflex Rapide ‘S’

EC directives:
• Low-voltage directive (2014/35/EU)
• EMC directive (2014/30/EU)

Applicable harmonized norms:
• EN ISO 12100: 2010

Responsible for the documentation
